

Asset Intelligence & Analytics

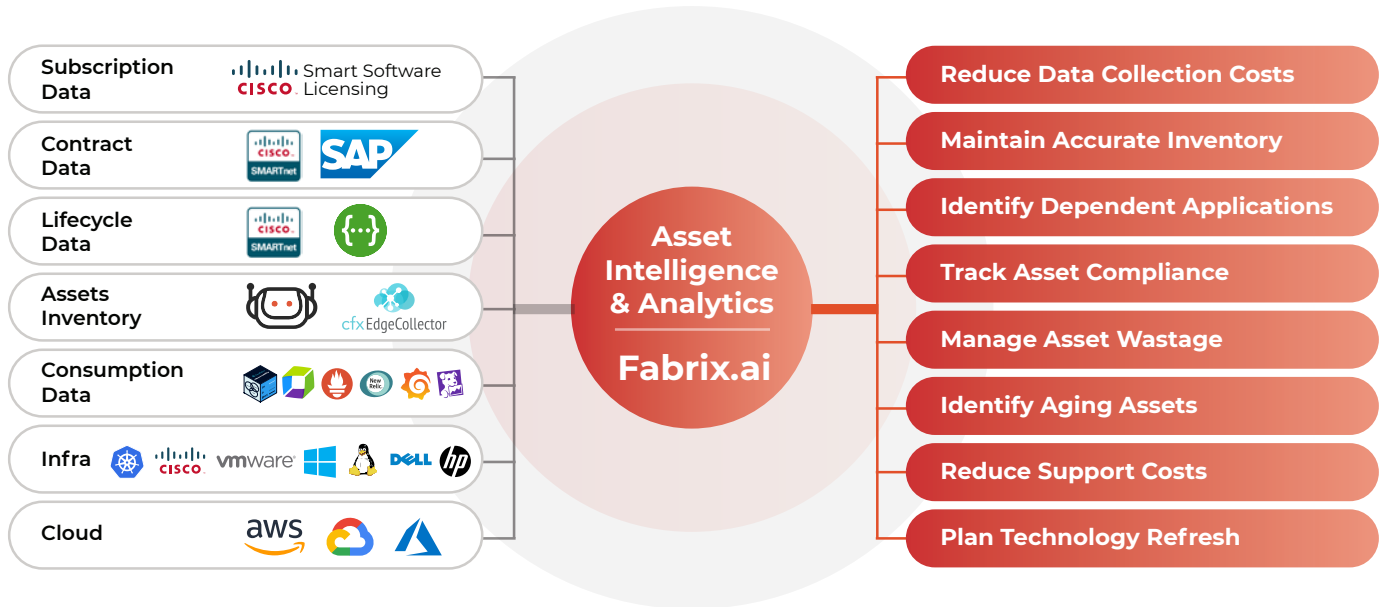

Business, Operations & Compliance Risk Insights

This solution provides real-time IT Asset Intelligence enabling IT productivity, Cost Savings and IT/Business risk mitigation. Key actionable insights include IT asset visibility, full-stack app-to-infra dependency map (ADM), change management insights, capacity/utilization insights, lifecycle EoS/EoL insights, best practice & plan of record compliance insights, support coverage insights and business risk scoring.

- Identify underutilized/unknown IT Assets
- Find abandoned apps on servers
- Find discrepancies (actual vs accounted)
- Track asset compliance and plan of record
- Business Risk rating from asset posture
- Identify end-of-life or out of warranty assets
- Accelerate change management
- Make your CMDB complete and accurate
- Agentless Discovery
- App-to-Infrastructure Dependency Map (ADM)
- Deployment Freedom: On-Prem or Cloud
- Field extensible with low-code pipelines. Bot library: 1000+ bots

The Power of CloudFabrix Robotic Data Automation Fabric (RDAF) - All CloudFabrix applications and solutions are built on the Robotic Data Automation Fabric (RDAF), a modern data platform that accelerates time-to-value, reduces costs, and scales across use cases. RDAF integrates seamlessly with your data and tools, featuring high-speed messaging, remote ingestion, a 1,000+ bot library, solution packs, and Gen AI assistants—deployable on-prem or in the cloud.

Key Use Cases

- IT Budget Planning
- Asset dependency mapping
- Asset Utilization Management
- Support and compliance risk management
- Single source of truth for assets
- Enable dynamic consumption models
